Z9 Security and any2any Partner to Deliver Seamless Mobile Credentialing for Access Control

March 2025 – Z9 Security, a leader in access control solutions, is excited to announce its strategic platform-to-platform integration with any2any, a leading provider of mobile credential issuance and management. This partnership expands the capabilities of the Z9/Flex ecosystem, enabling seamless mobile credential issuance and authentication across a wide range of readers, controllers, and access management platforms.

Through this integration, Z9 Security customers gain access to any2any's advanced credentialing technologies, including support for LEGIC-based mobile credentials and other widely adopted smart access solutions. This end-to-end secure integration ensures that mobile credentials are issued, managed, and authenticated with no additional complexity for end users—creating a frictionless experience for administrators and users alike.

Key Benefits of the Integration:

Expanded Mobile Credential Support: Z9/Flex customers can now leverage any2any's mobile credentials, including support for Google Wallet and Apple Wallet.

Seamless Management & Issuance: No need for separate credential management—Z9/Flex automates credential issuance, ensuring users receive access permissions within a single streamlined workflow.

Interoperability with Leading Readers & Controllers: The integration provides access to a broader range of compatible hardware, eliminating limitations on credential technology choices.

Enhanced Security & Compliance: Unlike legacy integrations that rely on less secure workarounds, this fully validated credentialing process ensures access control decisions remain secure and auditable.

"This collaboration is more than just a technology integration—it's a multiplication effect, expanding the ecosystem for both Z9 Security and any2any's customer bases," said Ken Larson, president of Z9 Security. "With this partnership, integrators, hardware manufacturers, and security software providers now have a powerful, unified solution that combines mobile credentialing and hardware access control in a single, scalable platform."

For security professionals, integrators, and technology providers looking to upgrade their access control systems with seamless mobile credentialing, this integration delivers the simplest and most secure path forward.

About Z9/Flex

Z9/Flex is a cloud-based access control integration platform designed to meet the needs of access control software vendors, manufacturers, integrators and dealers. Its white-labeling capabilities, extensive hardware compatibility, and seamless integration into leading security platforms make it an

ideal choice for businesses looking to provide advanced, branded solutions to their customers. For more information, visit <https://z9security.com/flex>.

About any2any

any2any provides secure, scalable mobile credential issuance and management, supporting LEGIC, NFC, Bluetooth, Google Wallet, and Apple Wallet. Designed for seamless integration with access control systems, any2any enables organizations to modernize security, eliminating physical credentials for a flexible, digital-first authentication experience.
